the space between the huts, neatly smeared with dung, separated off from the next by a low wall, sometimes less than a foot high, or the remains of what was once a wall. Not all villages give an appearance of neatness. Sometimes, especially after a rainy season, the huts are dilapidated and greatly in need of repair; courtyards may be untidy-looking and only partially smeared, while often in summer flies are a veritable pest. It is considered unlucky to kill them. Native ideas of cleanliness also differ from those of Europeans: it is considered nothing for a baby to urinate on the hut floor, while hours spent in smoky huts give the cloths and blankets worn by women an unpleasant odour. Each household, the domain of a married woman, is independent, having its own fields and granaries. The household of the chief wife is opposite the main entrance; on either side of her in Raselaka's village are her two fellow wives; further to her left are the households of an orphaned sister's son to the village head, married to one of his daughters, and of his eldest son, whose wife is still cooking for her mother-in-law and has as yet no cooking hut. To the right, beyond the third wife of Raselaka, lives a stranger, Letavula, with his wife and mother. There is an extra hut for the young boys of the village and one behind the rest belonging to a woman 'married' to the second wife of Raselaka. The Lovedu have no ranking of wives apart from the chief wife (the mother's brother's daughter) and there is no division of the village into right- and left-hand sides as among Zulu.

There are well marked differences even on the outside between cooking and sleeping or reception huts. The latter all face the *khɔrɔ* and have a wooden door; they are well plastered, many having a veranda all round. The former have their backs to the *khɔrɔ*, a framework of reeds as a door, and are more roughly made, very often unplastered on the outside, so that the framework of wooden posts is clearly visible. On entering a sleeping hut, you find yourself in a pleasing apartment. The floor, the greater portion of which is generally to the level of a foot higher than that of the entrance, is well smeared, while beside the wall are one or two raised platforms used to place things on and sometimes also as seats. The well-plastered walls merge into the roof, forming a white dome. This dome has circular rims marking the cross-laths which, beneath the plaster, hold together the framework of closely packed rafters. Sometimes there are mural decorations and at intervals an outjutting shelf of clay or a peg. The floor of the hut of Raselaka is empty except for a double or waisted basket (*khirudwana*), a wooden platter of food, a lantern, and two smart suitcases. But on the shelves are blankets, a rolled-up sleeping-mat, some clothes and beadwork of the wife, and on the walls a calendar and a coloured picture of the King and Queen of England. You must not expect to find this latter sophistication in many villages, but likewise the smooth, plastered dome is now uncommon. New Government regulations against the cutting of trees for wood, and the men's general disinclination to put much work into a building they will inhabit only at intervals, between periods of service in the towns, are combining with other factors to doom to extinction these beautifully made huts. That of Letavula, newer than the others, is an ordinary *rondavel* with unplastered roof and supporting beams. He had a European bed, but has discarded it as too cold in winter.

278 cure the symptoms, and whether for that reason and its psychological
757 effect or because of a truly curative value, men have great faith in the
755 medicines. There are undoubtedly ingredients in Lovedu medicines which cannot be empirically related to either symptom or cure, since they operate mainly by a technique of analogies which we relegate to the magical world. Such are animal products like hair, skin, excrement, and ovaries used in a variety of ways—for instance, for barrenness and indigestion; minerals like ironstone used for strengthening babies; and sea or river products, sand and shells, indispensable for keeping witches out of the village. But to Lovedu men and women the use of such ingredients in no way differs from the use of a herb: both are thought to have curative value and for them our distinction between magical and scientific treatments, between cause and effect and false analogy, does not exist. Just as a herb may have properties for curing disease, so, for example, the backbone of a python is effective in curing general debility or backache. The bone is pounded and the powder inoculated into scarifications along the back, by which means the immense power of the python is thus imparted to the patient. But note the sequel. So powerful is this medicine that the patient, when his time has come, will have difficulty in dying. His eyes will remain alive though the body is dead until once more the python powder is applied by being burned under his nose that he may inhale the smoke. This strengthening and the reversal of its influence are like injection and desensitization in our medical practice.

758 When we pursue Lovedu conceptions as regards the nursing and treatment of patients, we have once more to regard them from their
● [515 point of view. Cleanliness and hygiene are very remotely related to health.
777] Flies are freely tolerated because it is unlucky to kill them, not because, as is held in some other tribes, abundance of flies means riches in cattle. Invalids are not given a special diet, so that instructions by European doctors that a mother should feed her ailing baby on vitamin-containing foods or fruits are ignored unless medicine is given to be mixed with the food. It is equally fatal to appeal to the curative powers of nature: an invalid will impute unwillingness to help, ignorance or even sinister designs, if you tell him that nature will heal him and give no medicine. It is medicine and medicine alone that is thought to heal. But even medicine is never allowed much time in which to do its curative work. If one drug is not effective within a week it will be changed for another. Often a number of medicines are used at the same time, so that if one is ineffectual the other may heal. In every case we attended we found Native treatment was being given at the same time as, and often to the detriment of, our own. Nor would our protests be of any avail. Even in hospitals there are secret chewings of herbs and surreptitious steamings. Though it is admitted that certain medicines may not 'agree' when used together, use of the wrong medicine is not thought to have any harmful effects. At the most, a medicine merely does not heal; it never definitely harms the patient. Inexactness in the quantity of medicine taken is accompanied by a laxity in the carrying out of doctors' instructions which, though of no consequence where Native medicines are used, may do immense harm if the medicines are European. A careful
